

NAAN MUDHALVAN
PROJECT PHASE - V

COLLEGE CODE : 3108
COLLEGE NAME : Jeppiaar Engineering College
DEPARTMENT : Artificial Intelligence and Data Science
STUDENT NM-ID : aut23aids029
REGISTER NO : 310823243029

Completed the project named as
**TECHNOLOGY - Energy Consumption Tracker App using JavaScript,
HTML, CSS, and IoT Integration**

SUBMITTED BY,
NAME : MATHAVAN V
MOBILE NO : 9363561502

Phase 5: Project Demonstration & Documentation

Title: Energy Consumption Tracker App

Abstract:

The Energy Consumption Tracker App aims to provide users with insights into their energy usage by leveraging JavaScript, HTML, CSS, and IoT (Internet of Things) technologies. In its final phase, the system integrates real-time data collection from IoT devices, user-friendly interfaces for data visualization, and secure data management. This document provides a comprehensive report of the project's completion, covering the system demonstration, technical documentation, performance metrics, source code, and testing reports. The project is designed to help users monitor and optimize their energy consumption effectively. Screenshots, diagrams, and codebase snapshots will be included for a full understanding of the system's architecture and functionality.

1. Project Demonstration

Overview: The Energy Consumption Tracker App will be demonstrated to stakeholders, showcasing its features, performance improvements, and functionality. This demonstration highlights the system's real-time data collection, user interface, and data visualization capabilities.

Demonstration Details:

- **System Walkthrough:** A live walkthrough of the application, from user interaction to the display of energy consumption metrics.

- **Real-Time Data Integration:** The demonstration will show how the app collects and displays real-time energy data from IoT devices.
- **User Interface:** Showcase the user-friendly interface that allows users to visualize their energy consumption patterns.
- **Performance Metrics:** Highlight response times, data accuracy, and system scalability under multiple users.
- **Security Measures:** Explain the security protocols in place to protect user data and ensure privacy.

Outcome: By the end of the demonstration, the system's ability to provide real-time insights into energy consumption and its user-friendly interface will be showcased to stakeholders.

2. Project Documentation

Overview: Comprehensive documentation for the Energy Consumption Tracker App is provided to detail every aspect of the project. This includes system architecture, code explanations, and usage guidelines for both users and administrators.

Documentation Sections:

- **System Architecture:** Diagrams illustrating the complete system, including IoT device integration, data flow, and user interface components.
- **Code Documentation:** Source code and explanations for all code modules, including JavaScript for data handling, HTML for structure, and CSS for styling.
- **User Guide:** A manual for end users explaining how to interact with the app and interpret energy consumption data.
- **Administrator Guide:** Instructions for system maintenance, monitoring, and performance testing procedures.
- **Testing Reports:** Detailed reports on performance metrics, load testing, and data security evaluations.

Outcome: All critical components of the system will be well-documented, providing a clear guide for future development, deployment, or system scaling.

3. Feedback and Final Adjustments

Overview: Feedback from the project demonstration will be collected from instructors, stakeholders, and a broader group of test users. This feedback will be used to make final refinements before project handover.

Steps:

- **Feedback Collection:** Gather feedback from mentors, stakeholders, and test users via surveys and observation during the demonstration.
- **Refinement:** Address any performance bottlenecks, inaccuracies in data display, or usability issues based on the feedback.
- **Final Testing:** After adjustments, the system will undergo final testing to ensure full functionality, usability, and scalability.

Outcome: Final adjustments will optimize the system for a broader rollout, ensuring that it is fully ready for real-world deployment.

4. Final Project Report Submission

Overview: The final project report provides a comprehensive summary of all phases, key achievements, challenges faced, and outcomes of the Energy Consumption Tracker App project. This report will include testing results, performance improvements, and future recommendations.

Report Sections:

- **Executive Summary:** A concise overview of the project, outlining its objectives and major achievements.
- **Phase Breakdown:** A detailed breakdown of each phase, covering IoT integration, user interface development, and data management.
- **Challenges & Solutions:** Document key challenges encountered, such as data accuracy or user interface issues, and how they were resolved.

- **Outcomes:** A summary of the system's current capabilities and readiness for deployment.

Outcome: A detailed project report will be submitted, outlining the entire journey from concept to completion.

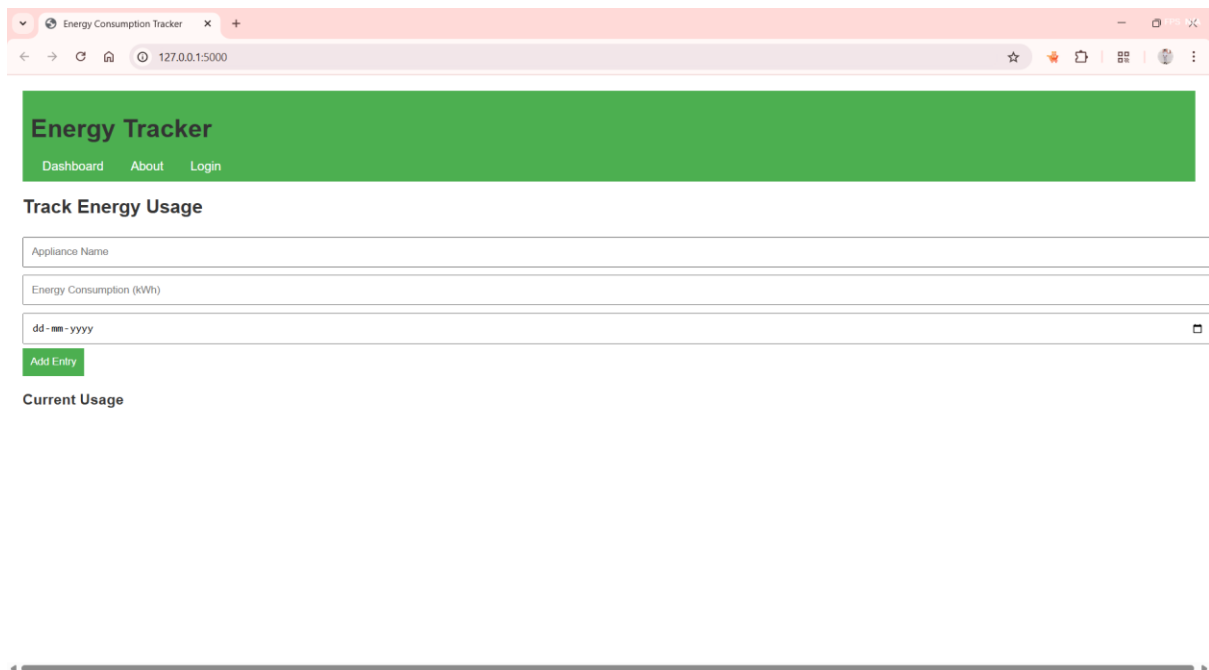

5. Project Handover and Future Works

Overview: The project's introduction for future development.

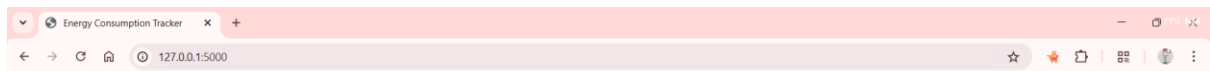

Handover Details:

- **Next Steps:** Suggestions for future work, including scaling the system to support more users, enhancing data visualization features, and implementing additional IoT device compatibility.

Outcome: The Energy Consumption Tracker App will be officially handed over, along with recommendations for future enhancements and guidelines for system maintenance.

The screenshot displays a web browser window with the title 'Energy Consumption Tracker'. The address bar shows the URL '127.0.0.1:5000'. The application has a green header bar with the title 'Energy Tracker' and navigation links for 'Dashboard', 'About', and 'Login'. Below the header, the section 'Track Energy Usage' contains three input fields: 'Appliance Name', 'Energy Consumption (kWh)', and a date picker set to 'dd-mm-yyyy'. An 'Add Entry' button is positioned below these fields. The section 'Current Usage' is visible at the bottom of the form area.

About This Project

Track and optimize your energy consumption with our intuitive monitoring system.

```
1 // script.js
2
3 // Configuration
4 const API_ENDPOINT = 'https://api.energytracker.com/data';
5 const POLL_INTERVAL = 60000; // 1 minute
6
7 // DOM Elements
8 const energyUsageElement = document.getElementById('currentUsage');
9 const errorElement = document.getElementById('error');
10 const chartCanvas = document.getElementById('energyChart').getContext('2d');
11
12 // Chart instance (using Chart.js)
13 let energyChart;
14
15 // Fetch energy data from IoT API
16 async function fetchEnergyData() {
17   try {
18     const response = await fetch(API_ENDPOINT);
19     if (!response.ok) throw new Error('HTTP error! Status: ${response.status}');
20     const data = await response.json();
21     updateUI(data);
22   } catch (error) {
23     handleError(error);
24   }
25 }
26
27 // Update UI with new data
```
